Star Stone

Star Stone
For this feature you will be able to reduce the size of your star stone you get from 5 all the way down to 1.

Understanding the basics, when we mine for star stone, our stones are basically a 5 block stone.

So how do we reduce the size so we could put more stone on screen?

If you look closely there's a star stone bag feature, you'll tap on tap and it will open up your bag.

In your bag there are two features, which are Smelt and Combine.

You will first click combine, in the combine page you can click auto craft, after crafting it, go back to the smelt and combine page.

Click on Smelt feature, on screen there's a quick melt feature upon clicking it it will show you 4 options to check 5-slot star stone, 4,3 & 2.

We will start by clicking 5-slot star stone, checking it and clicking yes, it will automatically help you smelt those 5-slot into 4-slot.

After that, go back to combine, and click auto craft, you should be getting some extra new 4 star combine if you have a lot of star stone saved up.

Repeat the process again, going back to smelt now check for 4-slot star stone and auto melt it, go back to auto combine and repeat the process until you get the smallest 1 block star stone.

Why do we need 1 block star stone? Cause there's a limited amount of space and if we can get the whole page filled with a 1 block prismatic our stats would be super ideal and fats chunks of stats.
